Project Description

The Glassmorphism Calculator is a simple web-based application developed using HTML, CSS, and JavaScript. It performs basic arithmetic operations such as addition, subtraction, multiplication, and division.

The project features a modern, responsive, and user-friendly interface, providing an efficient way to perform calculations while demonstrating fundamental frontend web development concepts.

Documentation

Objectives:

To develop a web-based calculator capable of performing basic arithmetic operations accurately and efficiently.

- To apply HTML, CSS, and JavaScript concepts in a practical frontend development project.
- To create a responsive, attractive, and user-friendly interface using modern web design techniques.
- To improve understanding of DOM manipulation, event handling, and interactive web application development.
- To enhance problem-solving and programming skills through the implementation of calculator functionality.

Technologies Used:

Technology

- ❖ HTML5 for structure
- ❖ CSS3 for styling and Responsiveness
- ❖ JavaScript for calculator functionality

Purpose

- ❖ Perform basic arithmetic operations
- ❖ Provide a user-friendly calculator interface
- ❖ Practice HTML, CSS, and JavaScript skills
- ❖ Learn DOM manipulation and event handling
- ❖ Build a responsive web application
- ❖ Deploy a project using GitHub Pages

```

SMARTCALCY USING JAVASCRIPT

```
function calculateResult(){  
  try{  
    display.value = eval(display.value);  
  }catch{  
    display.value = "Error";  
  }  
}
```

```
</script>
```

```
</body>
```

```
</html>
```

←-----SOURCE CODE END-----→

OUTPUT

The Smart Calcy application was successfully executed and tested. The calculator correctly performed arithmetic operations such as addition, subtraction, multiplication, and division. The user interface was responsive, easy to use, and displayed accurate results instantly.

The application worked efficiently across different screen sizes and provided a smooth user experience.

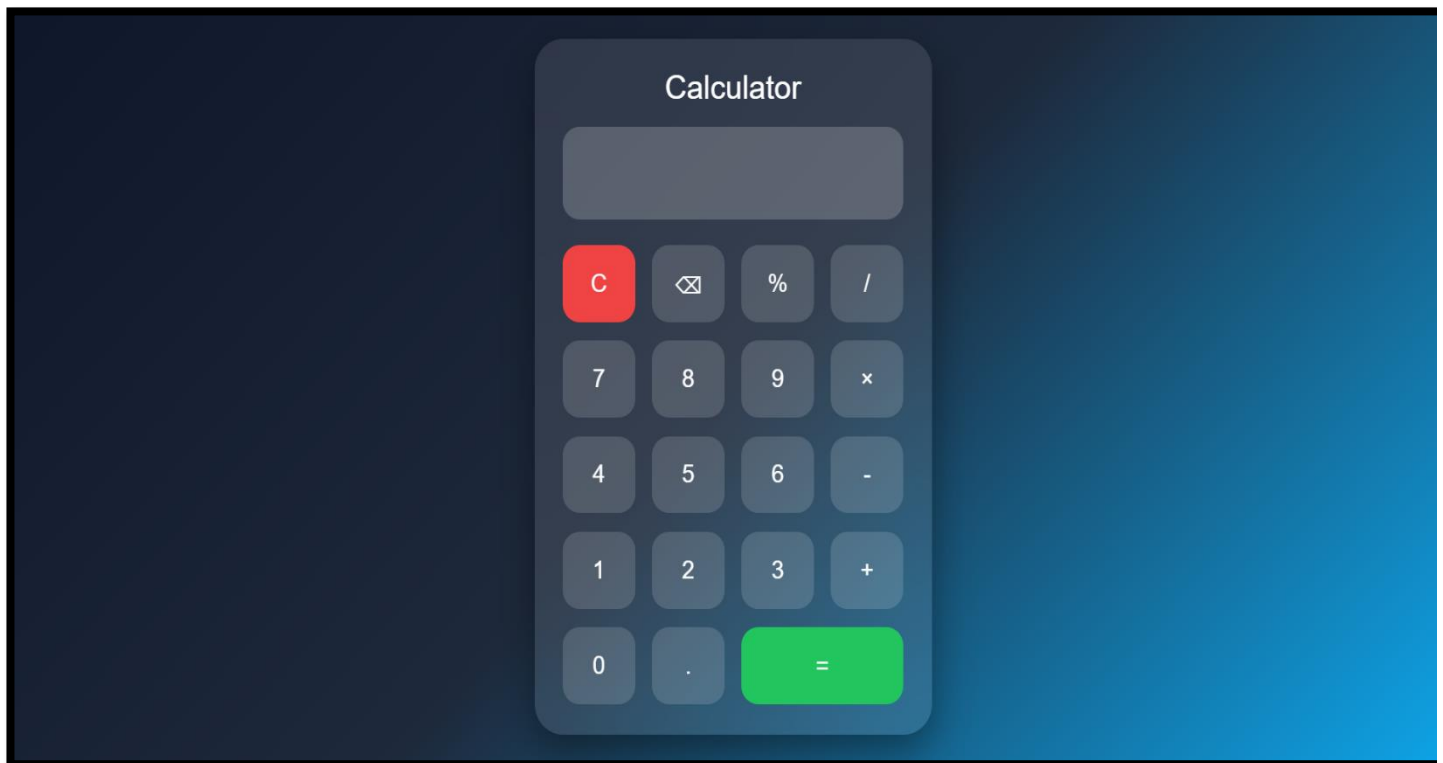

Figure 1 : Addition operation output($25+15=40$)

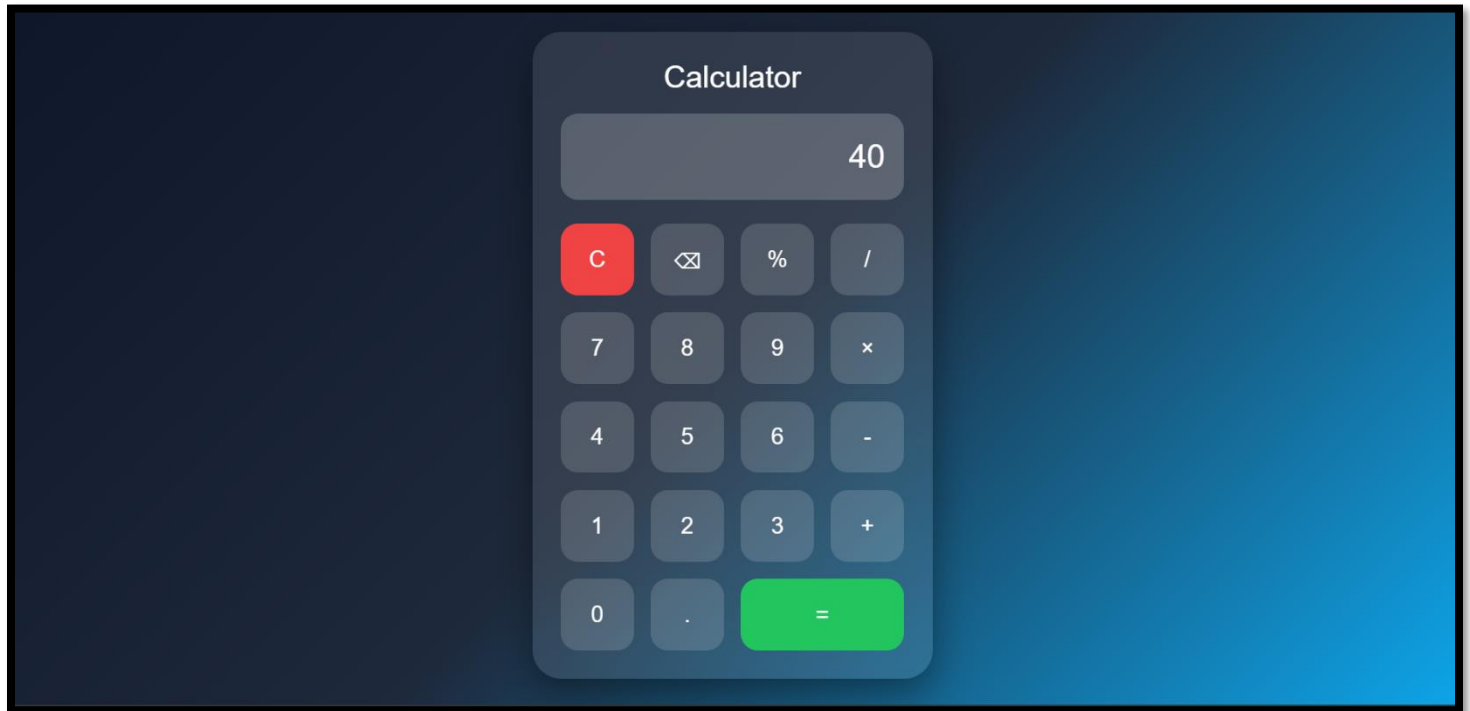

Figure 2 : Subtraction operation output($50-20=30$)

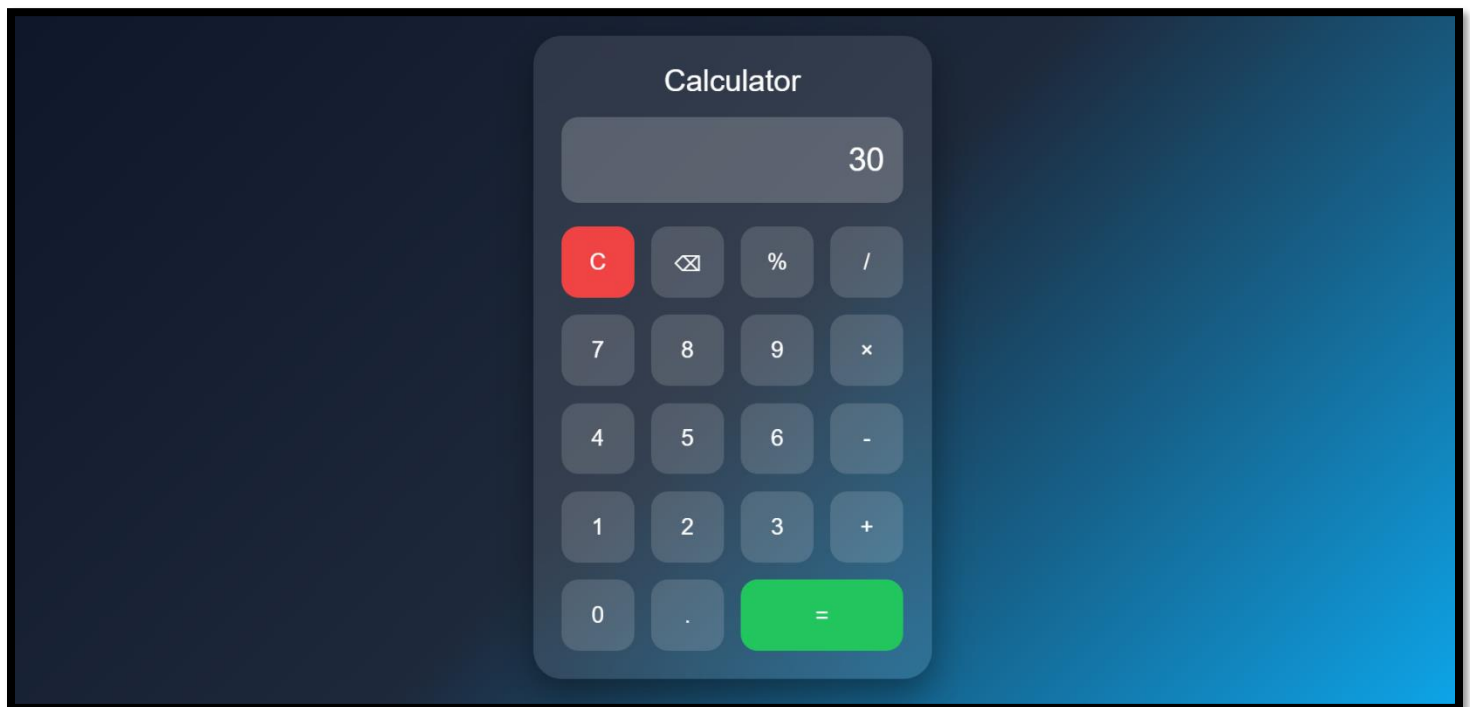

Figure 3: Multiplication operation output($12 \times 5 = 60$)

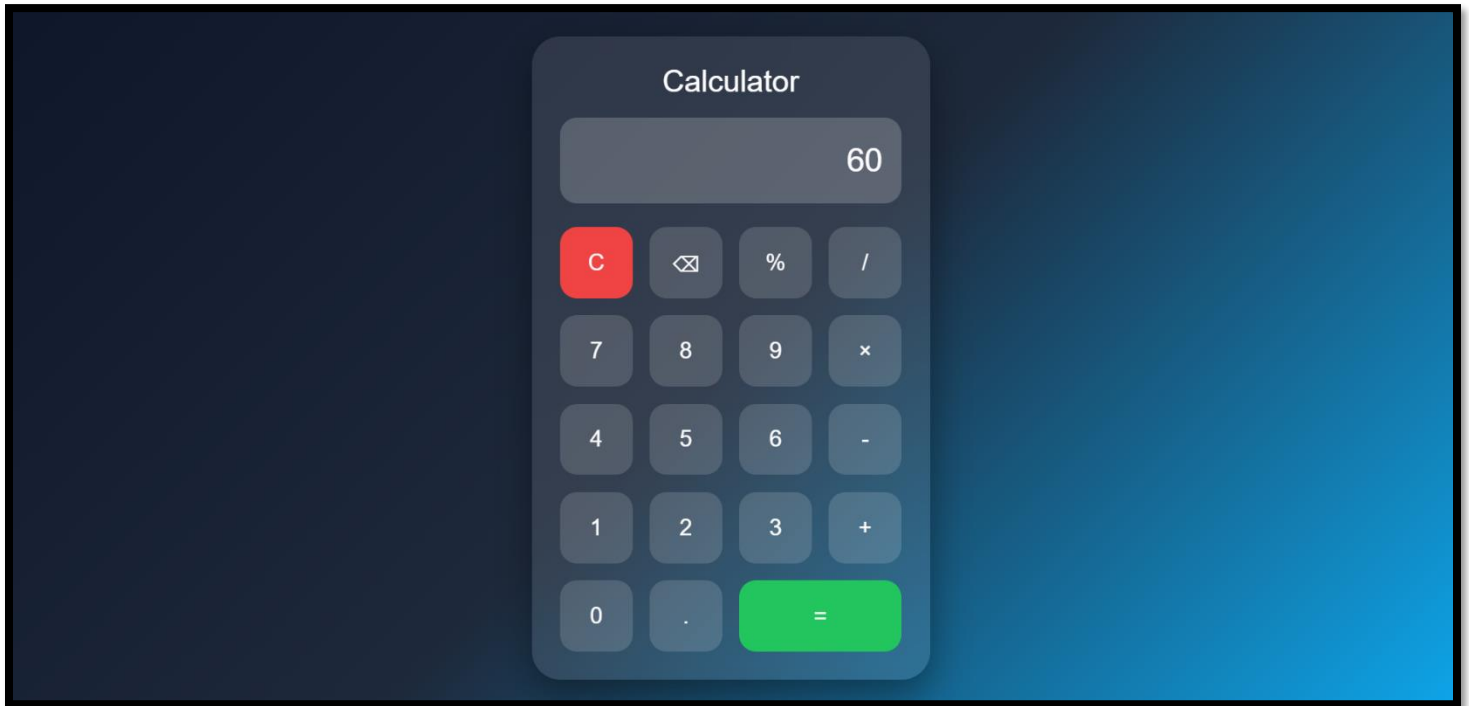

Figure 4: Division operation output($100 / 4 = 25$)

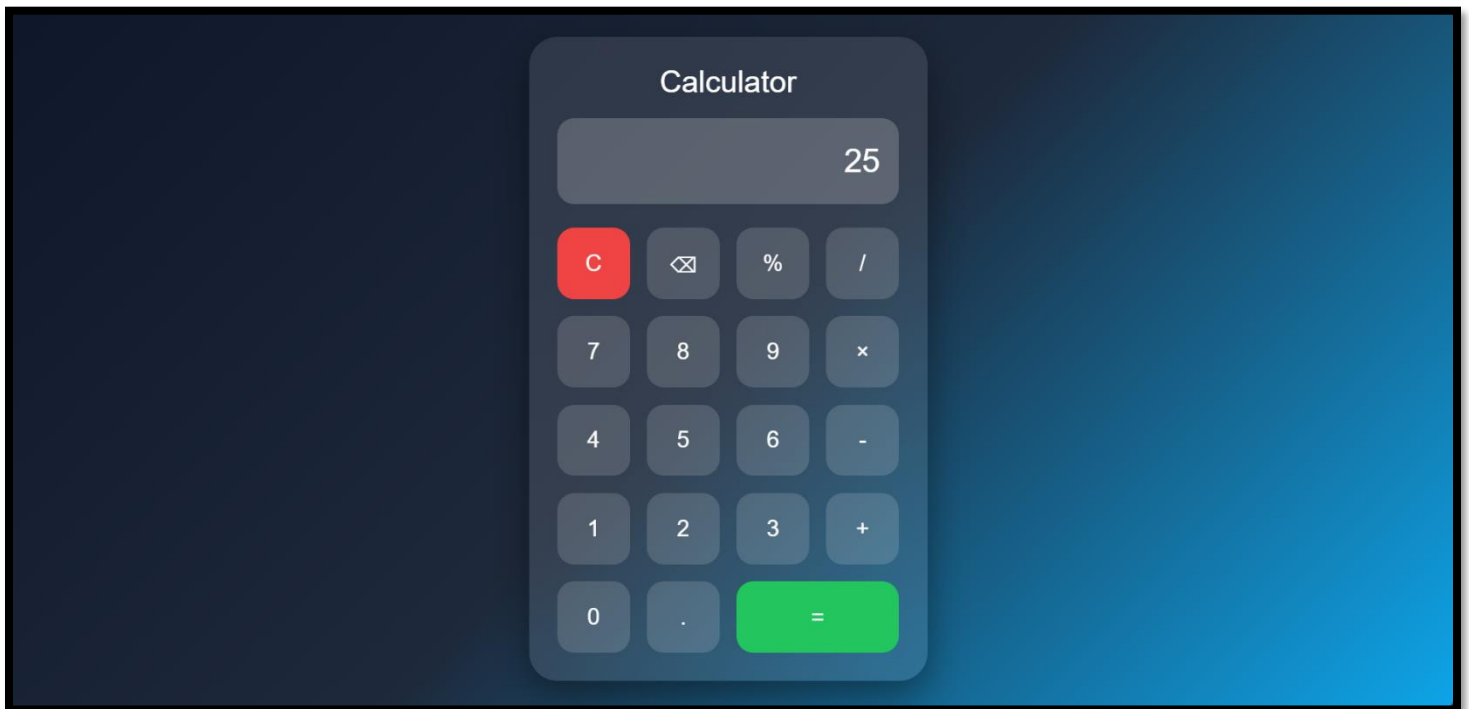

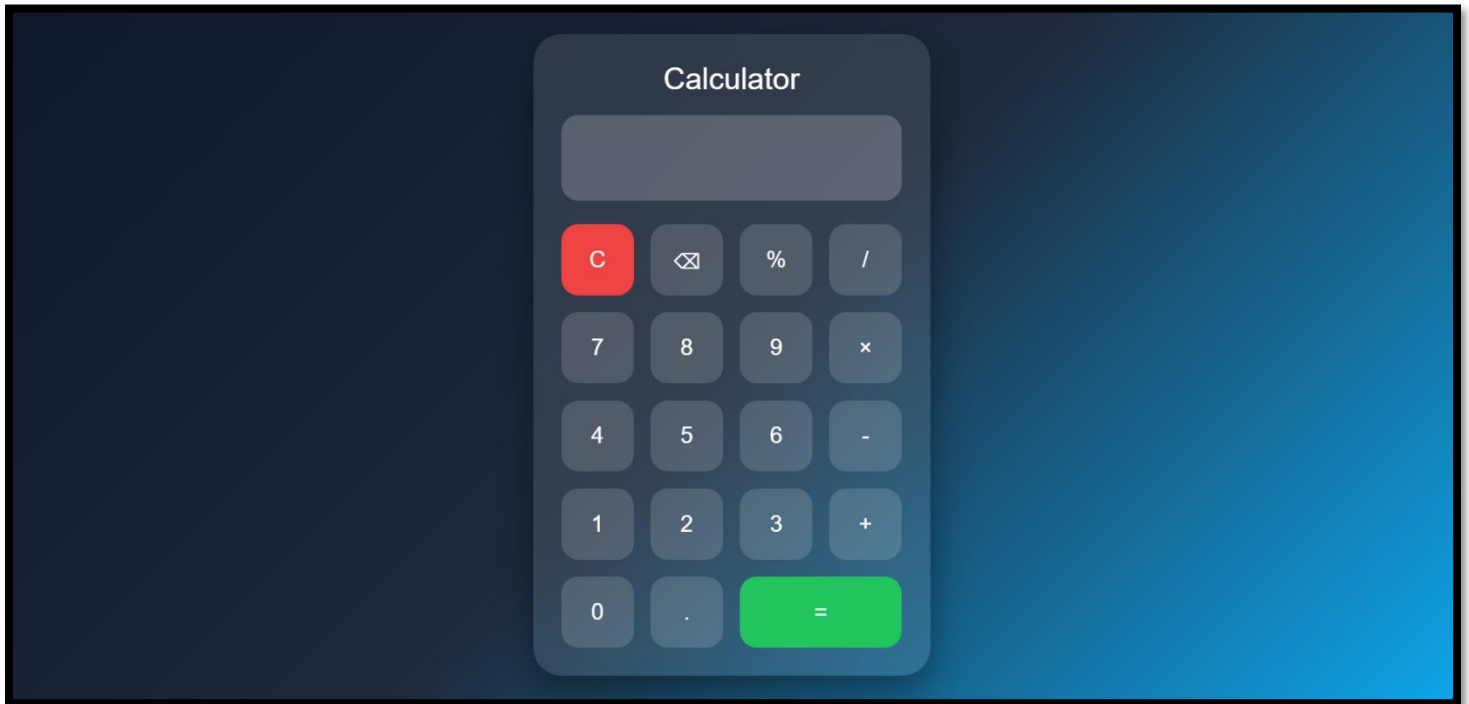

Figure 5: Clear Button

Conclusion:

The Smart Calcy project was successfully developed using HTML, CSS, and JavaScript. The calculator performs basic arithmetic operations such as addition, subtraction, multiplication, and division accurately and efficiently.

The project helped in understanding front-end web development concepts, user interface design, and JavaScript functionality. Overall, Smart Calcy is a simple, responsive, and user-friendly calculator application that demonstrates practical web development skills.
